What is Depop?

BUY SELL REPEAT: A Peer-to-Peer Marketplace

Depop Limited (Depop) is a e-commerce company that doubles as a resale and social media platform where sellers and buyers can DM one another, like items and follow one another.

- World into vintage fashion
- Embraces the practice of reusing old clothing while being environmentally conscious
- Currently hosts around 30 million users

How it works: Sellers can establish shops and earn money from reselling items or selling used things

- Primarily sells clothing (streetwear, Y2K, basics), accessories, selection of art homeware and records

Improve the Buyer Experience on Depop

Goal: Determine a product strategy to ensure convenience and reliability in Depop's buyer experience

Pain Point

Users struggle to find items when they:

- Don't know the exact name/brand of the clothing piece
- Want to shop entire aesthetics

Solution

- Implement a reverse image search
- Curate recommendations based on pinterest-board inputs

Impact

- ↑ discovery → ↑ listing views → ↑ purchases

Pain Point

Users are less inclined to make purchases because they:

- They do not have autonomy in product pricing

Solution

- Allow buyers to make offers on 2+items automatically

Impact

- ↑ increase initiative → ↓ abandoned carts → ↑ purchases

Agenda

1. User Research

2. Develop

3. Impact

1. User Research

User Interviews

Competitive Analysis

User Persona

Expressing Key User Experience Pitfalls

Incorporating Proven Features

Grailed

Incorporates a “Grailed Verified” tag for items that have been reviewed by a team at Grailed

Pinterest

Although not a direct competitor in the second hand clothing space, the incorporated reverse search feature exceeds Depop's keyword search

Ebay

Allows filtering for past sales, allowing consumers to better educate themselves on the going price of items

Poshmark

Has strong bundle features, allowing sellers to offer bundle sales, increasing sale conversions

Friction in The Purchase Process Directly Decrease Sale Conversion

Tim Wants to Purchase a Winter Coat

intentional second hand shoppers

Looking for a coat that's: black, warm, and trendy but unsure of an exact model/design

1

Keyword Search

Tim starts his search with a broad input like "black winter jacket" then refines his search as he scrolls through listings by identifying details like "lobster clasps"

2

Unable to Find Desired Item/Brand

With no form of image search and brand verification it's difficult to sift through quality and mediocre listings

3

Purchase Doesn't Go Through

Unable to find their item, no sale goes through, reducing company revenue and customer satisfaction

4

2. Develop

Solutions

Prototypes

Feature Prioritization

Pain Point	Feature	Priority	Reasoning & Trade-offs
Users can't negotiate prices on bundles , limiting flexibility and discouraging multi-item purchases	Button/feature to make offers on bundle deals	Medium/ High	Impact: Drives multi-item purchases and higher cart value. Effort: Medium, UI updates and backend for offers. Trade-off: Medium priority, boosts revenue but less critical than trust/search fixes.
Users struggle to find the exact items they want because they don't know the right keywords to search	Reverse image search and Pinterest integration	High	Impact: Improves discoverability and search satisfaction ; addresses an important user frustration. Effort: Medium/High, requires image recognition and search backend integration. Trade-off: Prioritized due to engagement improvement.

Feature Prioritization

Pain Point	Feature	Priority	Reasoning & Trade-offs
Users lack confidence in item sizing and authenticity , leading to uncertainty and potential returns.	Require measurements, scan tag, verification enabled (filter by authenticated items)	Medium/ High	Impact: Builds trust , reduces returns , and supports higher-margin sales. Effort: High, backend verification and UX updates. Trade-off: Prioritized, trust outweighs minor listing delays.
Users have limited filtering options, making it hard to find specific items compared to other platforms.	Add filtering options	Low	Impact: Improves search efficiency , but less critical than trust or discoverability. Effort: Medium, backend and UI updates. Trade-off: Deprioritized to focus on higher-impact features like authentication and reverse image search.

Feature Prioritization

Implement a Make Offer function when users create a bundle

Problem 1: Users can't negotiate prices on bundles – limiting flexibility, discouraging multi-item purchases

Before

After

Implement a reverse image search and integrate Pinterest to customize user search

Problem 2: Users struggle to find items because they don't know the right keywords for them

Before

User struggle to put items into search words

After – Image Search Integration

After – Pinterest Integration

3. Impact

Implementation Timeline

KPI Metrics

Implementation Timeline

Addressing User Needs:
Helping users search more effectively

Data Collection & New Features:
Assess how users interact with features before adding new features

Strategic Timeline:
Reverse Image Search and Pinterest Integration first due to high effort

KPI

Key Result Area	KPI 1	KPI 2	KPI 3
Product Discovery/Search Effectiveness	30% of users using reverse image search	10% increase in search-to-transaction conversion rate	20% reduction in no-result searches
Purchase Behavior/ Multi-Item Sales	10% increase in average order value	30% bundle-offer acceptance rate	40% increase in multi-item purchases

Thank You!
