Case Study

Proposal to grow the platform internationally

Product Case Study

Brown University SPRINT, Stockholm Entrepreneurship Program

Democratize and grow public sector sales.

Executive summary

Project Goal

Increase proportion of US accounts submitting a Tendium-sourced bid by modifying and improving the current platform to support the US market under the Managed Services Team. Our analysis and research identifies likely barriers in the US government procurement space: fractioned state requirements, bid eligibility and win likelihood, and prioritization.

Core Pain Points

1. **Multilayered System** – public portal listings (SAM.gov, state specific websites), strict legal regulations and guidelines
2. **Bid Ineligibility** – late surfaced eligibility requirements
3. **Operational Specificity and Regulatory Frameworks**

Core Solution Proposals

1. **Strengthen US Account Onboarding** — capture state coverage, labor/pricing structure, certifications, past performance, and other eligibility criteria upfront.
2. **Add AI-Powered Bid Discovery Controls** — have Louis generate relevant tender keywords, filter opportunities by state/agency offering, and provide direct access to SAM.gov sourcing.
3. **Introduce a Bid Fit Score** — rank opportunities based on eligibility, geographic fit, and other bid requirements so users can prioritize the opportunities they are most likely to win.

Increase proportion of US accounts submitting a Tendium-sourced bid

North star

US B2B and B2G companies currently use a range of sales intelligence and GTM support

Platform / Feature	Native Bid Solutions	Value Proposition	Customer Targetting	Pricing
Starbridge 	Combines RFPs from thousands of procurement sources; AI scores opportunities by product, region, and win likelihood; generates compliant proposal drafts	Key word AI search before any filtering matches, combined pre-RFP buying signals and proposal writing into one GTM platform	Primarily sales/GTM teams selling to state & local government, K-12, and higher education	Custom enterprise pricing based on team, market, and data needs; no public fixed tiers.
GovDash 	Aggregates federal and SLED opportunities and has dedicated state/local search, document access, forecasts, AI analysis, and pursuit-management tools.	End-to-end GovCon workflow that connects opportunity discovery through capture, pricing, proposal submission, and post-award management	Government contractors ranging from small businesses to enterprise teams, especially firms with structured BD, capture, and proposal functions	Modular / custom pricing; subscriptions by module plus usage credits for other AI workflows
SAM.gov 	Official federal contract-opportunity search with keyword/advanced filters, saved searches, opportunity tracking, and interested-vendor lists	Official source of record for U.S. federal contracting opportunities	Any business pursuing U.S. federal government contracts	Free; opportunities can be searched without even creating an account
HigherGov 	AI analysis, match scoring, alerts, pipelines, pursuit management, and market intelligence for local and federal opportunities	Makes fragmented government procurement data searchable and strong contenders to win	Government contractors and BD teams, consultants, investors, and government-market researchers	Starter: \$500/year, 1 user. Standard: \$2,500/year, up to 10 users. Enterprise: custom.

Grow your public sector
sales. Skip the hassle.

tendium

Research Methodology

1. **US Procurement Market Analysis:** Researched federal, state, and local procurement structures, regulations, sourcing channels, and tender requirements.
2. **Competitive Platform Benchmarking:** Evaluated platforms such as Starbridge, HigherGov, GovDash, and SAM.gov to understand existing discovery, qualification, and bid-management workflows.
3. **Tendium Product Gap Analysis:** Compared US market requirements and competitor capabilities against Tendium's current workflow to identify friction points and product opportunities.

Research scope: Findings are based on secondary research and platform analysis rather than direct user interviews; recommendations should be validated through future customer testing.

Pain Point 1: Fragmented US Procurement Landscape

12

Unlike the EU's more harmonized procurement ecosystem, US public procurement becomes increasingly fragmented below the federal level, requiring suppliers to navigate jurisdiction-specific portals, processes, and eligibility requirements.

Relevant opportunities can be missed when sourcing is spread across multiple portals.

US

SAM.gov centralizes federal opportunities, but state and local opportunities are distributed across separate state, city, county, school district, and agency systems.

EU

Higher-value tenders from central, regional, and local public buyers across EU countries generally must be published through TED (Tenders Electronic Daily).

State and local procurement processes differ significantly by jurisdiction.

US

A contractor selling in California versus Texas can encounter different procurement systems, registration processes, rules, and solicitation formats.

EU

Member States also have their own procurement laws, but higher-value procurements operate under harmonized EU directives.

Users manually determine where to search based on where their company can operate.

US

Geography directly affects which state/local portals a supplier needs to monitor, so a company operating in five states may need to track differently.

EU

TED lets suppliers search opportunities across countries using common fields such as place of performance, procurement category, keywords, and notice type from one interface.

Where can you operate?

US procurement is jurisdiction by jurisdiction. Tell us where you are registered and what you are certified for, and we will only surface tenders you can actually bid on.

Pain Point 2: Operational Specificity and Regulatory Frameworks

13

Winning US public work requires meeting operational and regulatory conditions set at the jurisdiction level. Labor standards, pricing structures and contract vehicles differ by state and agency, so the same offering has to be re-specified for each market a supplier enters.

Labor and wage rules are set locally and priced into every bid.

US

Prevailing-wage laws, certified payroll reporting and apprenticeship requirements differ by state and by agency, materially changing cost structure between jurisdictions.

EU

Labor conditions follow national law within a harmonised framework, and social criteria are applied through the same directives across Member States.

Pricing and delivery terms follow the contract vehicle, not the supplier.

US

Cooperative purchasing agreements, IDIQ vehicles and state term contracts each impose their own pricing formats, discount schedules and reporting obligations.

EU

Framework agreements and dynamic purchasing systems operate under common directive rules, so the mechanics are recognisable across countries.

Compliance obligations continue after award.

US

Domestic sourcing rules, insurance and bonding maintenance, and agency-specific reporting continue through the contract term and vary by jurisdiction.

EU

Post-award obligations are largely defined in the contract notice and governed by transposed directives, giving a consistent baseline across the market.

Louie's read

You clear every mandatory requirement except the third federal reference. Bexar County courthouse O&M is state, not federal, so it will not count. Adding the 2024 VA clinic contract would close the gap.
